Partnering for better *geoscientific data*

acQuire
nova network

The Nova Network is an opportunity for business growth providing services with an industry-leading software solution.

Partner with the acQuire Nova Network

As a consultant in the mining and exploration community, you influence how geoscientific information is managed. Your expertise is critical to your customers' needs for continued and future success.

acQuire's GIM Suite is an industry-leading geoscientific data management solution with a global customer base. Our customers rely on us to provide them with the people, processes and technology they need, when they need it.

The Nova Network combines more professional service options for acQuire customers while offering the consulting community an opportunity for business growth.

Getting involved as a Nova Network consultant

The Network is a collaboration between acQuire and independent consultants to provide high-quality geological data services and solutions, using acQuire technology products.

Nova Network Partners perform:

- **Pre-implementation services**
- **Post-implementation services**
- **Data management services**

You can offer these services to assist acQuire's customers or develop and support your own customers, depending on your level of accreditation. You have access to GIM Suite Learning courses to receive accreditation and can also use acQuire's technical support.

Our combined expertise delivers better results for the industry's growing demand for geoscientific data management.

Who can become a Nova Network Partner?

Joining the Nova Network is based on a range of criteria such as your experience level with the GIM Suite technology, location, service offering and capacity to service customers.

Your Nova Network Partnership is scalable and will grow with you depending on the number of accredited technologists operating in your business.

If you're a consulting company with the following attributes, you're a good fit for the Nova Network.

- Have strong networks in the natural resources industry.
- Are passionate about developing your business further.
- Are active within the natural resources community.
- Have a good reputation for delivering quality geoscience data management services.

To find out how to join the Nova Network, please contact novanetwork@acquire.com.au

You can offer services as GIM Keeper or GIM Provider:

GIM Keeper

- Provide Pre and Post-Implementation Services.

- Prepare data for a GIM Suite implementation.

- After a GIM Suite implementation, sites may require further data management services. As an accredited Nova Network Partner, you can offer on-going services for acQuire customers, for short-term and long-term engagements.

GIM Suite Provider

- If your client does not currently have a solution in place, you can provide geoscience data management services, using the GIM Suite in an online managed environment administered by acQuire.

Accreditation

When your consultancy joins the Nova Network, your geoscientific data management capabilities are promoted throughout the mining and exploration community.

Accreditation of individual technologists in your consultancy occurs through GIM Suite Learning courses. Recognition of prior learning and proficient GIM Suite skills can also contribute to your accreditation.

Please visit our **GIM Suite Learning webpage** for more information about accreditation levels.

Service Type	GIM Suite Learning Course	
	GIM Suite Practitioner (2000)	**GIM Suite Professional (3000)**
GIM Suite Provider	✔	👍 Recommended
GIM Keeper	✔	👍 Recommended

Minimum accreditation levels:

- Technologists must be an accredited GIM Suite Practitioner (2000) to offer GIM Keeper or GIM Suite Provider services.

- The GIM Suite Professional (3000) accreditation is preferred for GIM Keeper services.

acQuire's commitment

We provide geoscience data management software and services for the mining industry. Organisations working in exploration, resource development or mining rely on our data management solution to make profitable business decisions based on the quality and integrity of their data assets. Our software is paired with product support services and accredited training to meet our customers' evolving technology needs.

acQuire is supporting Nova Network Partners with the vision of expanding geoscientific data management services to develop great customer solutions with our partners.

Contact us

We are interested in meeting you if your consulting business provides geological data management services. For a confidential discussion about the options to join the Nova Network, please get in touch at **novanetwork@acquire.com.au**

We are looking for Nova Network Partners who share our values and passion for quality delivery and outstanding customer service.
