

The Nova Network delivers high-quality geoscientific data management consulting services through accredited partners, using acQuire's software products.

Partnering for better geoscientific data management

- Engage a certified Nova Network Partner to manage your geoscientific information.
- Access a diverse and experienced consulting base.
- Receive effective data management services in all stages of project development and maintenance.
- Choose your preferred Nova Network Partner from our Nova Network directory, based on service types and location.
- Benefit from GIM Suite without implementing the technology in-house.

If you need a geoscientific data management solution

If you don't have software in place to manage your geoscientific data, you can use the Nova Network. Nova Network Partners offer you access to the GIM Suite technology in an online environment.

If you're already using GIM Suite

If you're an acQuire customer, you can engage Nova Network Partners to provide pre- and post-implementation data management services for your current GIM Suite installation. Enlist their help for project-specific work or in an ongoing basis to supplement your current team.

Expertise when and where you need it

If you want a partner you can trust for your next geoscientific data management project, we have certified Nova Network Partners located across the globe, ready to help.

Find a partner for your next project

We want to help miners and explorers find the right talent for their data management projects. The Nova Network is our way of ensuring this happens.
